

SITE RISK REPORT

Domain: example.com
Scan date (UTC): 2026-09-22T18:04:51Z
Target: https://example.com/
Report model: trust.ai2eo.com / SiteRisk Report

Executive Summary

Overall grade	Score	Risk level
C	78/100	MODERATE

example.com scored 78/100 (grade C, risk MODERATE). The scan identified 4 finding(s).
Primary concern: Content-Security-Policy was not observed in the inspected response.

Key finding

Content-Security-Policy was not observed in the inspected response

Top 3 urgent actions

1. Define a CSP (start with report-only) and enforce once validated.
2. Add Strict-Transport-Security: max-age=31536000; includeSubDomains (consider preload after testing).
3. Add X-Frame-Options: DENY/SAMEORIGIN or CSP frame-ancestors.

Business impact

Commercial impact cannot be fully assessed from technical evidence alone.

Narrative generator: deterministic-fallback

1. Security & Infrastructure

HTTP / HTTPS

Field	Value
Status	200
Final URL	https://example.com/
Redirects	1
Redirect chain	https://example.com -> https://example.com/
Server	cloudflare
Reachable at scan	True

TLS certificate (direct handshake)

TLS check unavailable: TypeError: 'str' object cannot be interpreted as an integer

SSL Labs

Status: error - Hostname blacklisted. No grade is claimed without a completed assessment.

Security headers

Header	Observed
Strict-Transport-Security	(not observed in inspected response)
Content-Security-Policy	(not observed in inspected response)
X-Content-Type-Options	(not observed in inspected response)
Referrer-Policy	(not observed in inspected response)
Permissions-Policy	(not observed in inspected response)
X-Frame-Options	(not observed in inspected response)

Header absence was not observed in the inspected response; this is not by itself evidence of compromise.

2. Email Security

Control	Status	Detail
SPF	strong	v=spf1 -all
DKIM	present	selector=default
DMARC	strong	v=DMARC1;p=reject;sp=reject;adkim=s;aspf=s
MX	present	0:

No email findings from completed checks.

3. Threat & Reputation

Source	Verdict	Detail
Google Safe Browsing	UNAVAILABLE	Google Safe Browsing requires GSB_API_KEY; not configured.
URLhaus	UNAVAILABLE	URLhaus API returned 401 without auth; set URLHAUS_AUTH_KEY.
AlienVault OTX	ERROR	timeout
urlscan.io	CLEAN	pulses=-, total=10000

API timeout or failure is not treated as a threat match; only an explicit MATCH from a source is.

Findings (all)

#	Severity	Finding	Evidence
1	MEDIUM	Content-Security-Policy was not observed in the inspected response	CSP header absent
2	MEDIUM	Strict-Transport-Security was not observed in the inspected response	HSTS header absent on HTTPS response
3	LOW	No frame-ancestors/X-Frame-Options protection observed	Both X-Frame-Options and CSP frame-ancestors absent
4	LOW	X-Content-Type-Options was not observed in the inspected response	nosniff header absent

4. Prioritized Recommendations

1. Define a CSP (start with report-only) and enforce once validated.
2. Add Strict-Transport-Security: max-age=31536000; includeSubDomains (consider preload after testing).

5. Technical Evidence / Appendix

Check provenance

Check	Status	Confidence	Provenance	Error
dkim	ok	0.9	found DKIM at default._domainkey.example.com	-
dmARC	ok	1.0	TXT_dmarc.example.com policy=reject	-
dns	ok	1.0	resolve A/AAAA/NS for example.com	-
http	ok	1.0	GET https://example.com/ status=200	-
local_tls	error	0.0	unhandled worker exception	TypeError: 'str' object cannot be interpreted as an integer
mx	ok	1.0	MX example.com -> 1	-
otx	timeout	0.0	timeout	timeout
safe_browsing	unavailable	0.0	env GSB_API_KEY missing	Google Safe Browsing requires GSB_API_KEY; not configured.
security_headers	ok	1.0	response headers keys=['age', 'allow', 'cf-cache-status', 'cf-ray', 'connection', 'content-encoding', 'content-type', 'date', 'last-modified', 'server', 'transfer-encoding']	-
spf	ok	1.0	TXT example.com SPF found	-
ssllabs	error	0.5	ssllabs analyze status=ERROR (no grade produced)	Hostname blacklisted
urlhaus	unavailable	0.0	env URLHAUS_AUTH_KEY missing (live probe 2026-09-22: HTTP 401)	URLhaus API returned 401 without auth; set URLHAUS_AUTH_KEY.
urlscan	ok	1.0	urlscan search total=10000 malicious=0	-

Warnings

- safe_browsing: Google Safe Browsing requires GSB_API_KEY; not configured.
- urlhaus: URLhaus API returned 401 without auth; set URLHAUS_AUTH_KEY.
- local_tls: TypeError: 'str' object cannot be interpreted as an integer
- ssllabs: Hostname blacklisted
- otx: timeout
- Some checks were unavailable and excluded from scoring: safe_browsing, urlhaus.
